

ABSTRACT

The invention starts with a wiper device, in particular for a motor vehicle, which includes a wiper arm (10a – 10j), which features a wiper rod (12a – 12j) and a fastening part (14a – 14j) connected in a non-articulated manner with the wiper rod (12a – 12j).

It is proposed that the wiper device have at least one spoiler element (16a – 16j) to generate a flow-induced bearing force.
